

FUSION

The Rodlin Design Fusion is a versatile and durable seating solution designed for modern lecture theatres, training facilities, conference centres, and corporate auditoriums. Its integrated fold away writing tablet provides a practical workspace while maintaining a clean, streamlined appearance. The writing tablet is supported by a robust die-cast aluminium alloy mechanism and features a durable ABS composite writing surface engineered for everyday use.

Designed with both comfort and longevity in mind, the Fusion incorporates a reinforced polypropylene inner back frame and a high-strength PA nylon outer frame with fibreglass reinforcement, delivering exceptional structural integrity and reliability. The ergonomically designed armrests are manufactured from high-quality ABS material, offering comfort and durability in high-traffic environments.

The seat assembly combines a moulded plywood inner structure with high-density cold-cured polyurethane foam, providing excellent support, comfort and resilience for extended periods of use. A reinforced polypropylene seat shell further enhances durability, making the Fusion ideally suited to demanding applications.

Supporting the chair is a heavy-duty carbon cold-rolled steel structure that undergoes a comprehensive finishing process, including rust treatment and electrostatic powder coating, ensuring long-lasting performance and corrosion resistance. The addition of a double torsion spring seat return mechanism allows for smooth, reliable operation and helps maintain a neat and organised seating layout.

Warranty - 5 Years

DIMENSIONS:

- Centers - 530mm
- Back-to-Back - Minimum 800mm
